

MYCORRHIZAL INOCULANT

GET MORE FROM YOUR SEEDS
BY BETTER WATER & NUTRIENT UPTAKE

Easiest way to benefit from **MYCORRHIZAE**

AGTIV® ON SEED™ is a specially designed seed treatment technology integrating mycorrhizal inoculant to promote healthy emergence and greater seedling vigor that increases:

UNIFORMITY • YIELD • QUALITY

AVERAGE INCREASE
2018

+ 11.9 %

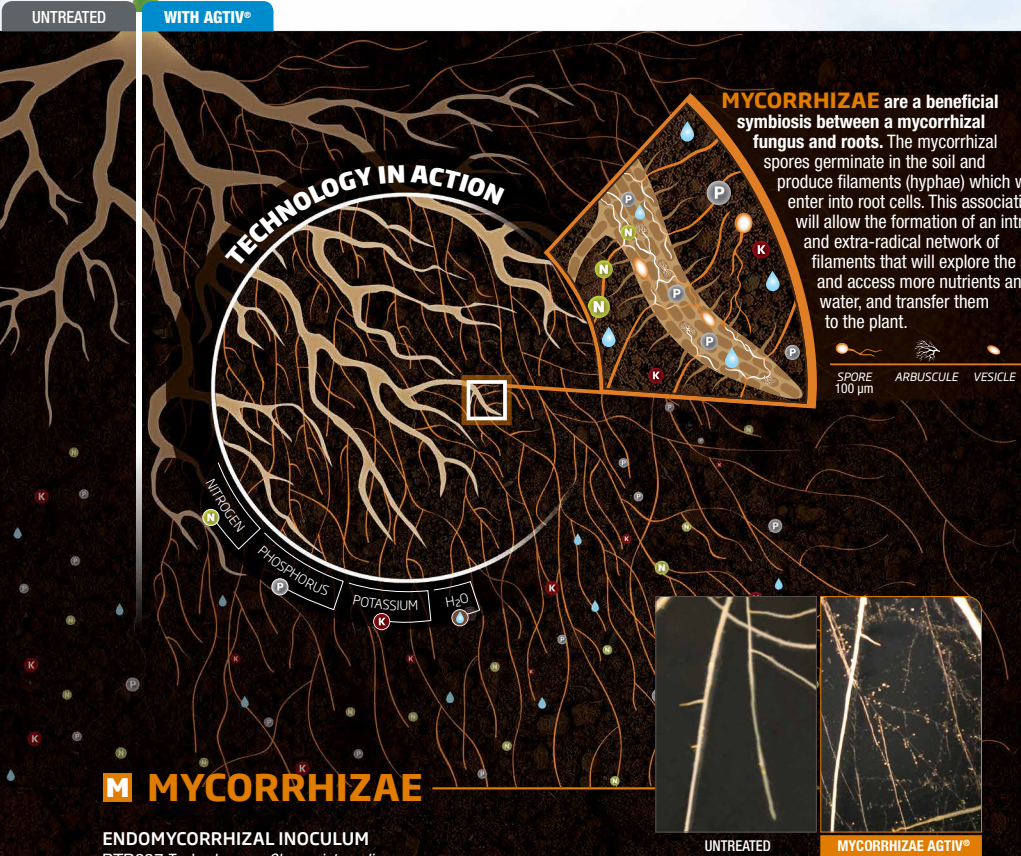

Carrots

+ 11 %

Onions

PROVEN TECHNOLOGY

Bigger and straighter carrots on the right with AGTIV® and improved uniformity of carrots.

Onion split field with AGTIV® vs untreated. Plant growth and health is enhanced on the right.

More developed root system on the right, and plants are larger with AGTIV®.

MYCORRHIZAE

ENDOMYCORRHIZAL INOCULUM
PTB297 Technology — *Glomus intraradices*

Production: An exclusive aseptic production process developed by Premier Tech using standards of the high-technology industry to obtain viable mycorrhizal spores of a consistent high quality.

- ✓ EXPAND ROOT SYSTEM GROWTH
- ✓ INCREASE TOLERANCE TO STRESSES
- ✓ ENHANCE NUTRIENT & WATER UPTAKE
- ✓ IMPROVE SOIL STRUCTURE

PROVEN QUALITY OF TREATED SEEDS

SUPERIOR STRAIN

- ✓ Quick colonizer
- ✓ Good collaborator
- ✓ Efficient P uptake & transfer

UNIQUE PRODUCTION

- ✓ Aseptic conditions
- ✓ Industrial scale
- ✓ Consistent high-quality

CERTIFIED TREATMENT

- ✓ Proven efficacy & viability
- ✓ Quality control from manufacturer to treated seeds
- ✓ Close partnership with the seed treater for integration & compatibility
