

INSTALLATION GUIDE

AGTIV® Liquid Injection Kit

Premier Tech recommends a customized equipment, such as the Dosatron® Injection System, for the application of its liquid inoculants. Designed for an easy application of AGTIV® liquid products, the AGTIV® Liquid Injection Kit operates off the main solution flow of existing in-furrow application system.

The installation of the AGTIV® Liquid Injection Kit requires **two steps**:

- 1** PREPARE THE INJECTION KIT
- 2** INSTALL THE INJECTION KIT ON THE EXISTING IN-FURROW SYSTEM

1 PREPARE THE INJECTION KIT

1.1

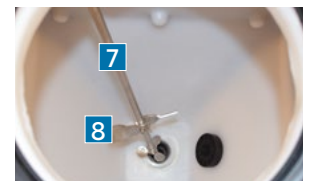

Have all the required parts for the installation

The box will contain the following parts:

- 1** Dosatron® pump with all fittings (1x)
- 2** Tank on a metal stand (1x)
- 3** Reducing nipples (4x)
- 4** Hose clamps (4x)
- 5** Grey bracket with large hose clamp (1x)
- 6** Coupler (1x)
- 7** Stainless steel shaft (1x)
- 8** Mixing impellers (2x)
- 9** 12-Volt motor and wire (1x)
- 10** Basket screen for the tank (1x)

NOTE: Purchase the following parts to install the AGTIV® Liquid Injection Kit on the existing in-furrow system:

- Teflon
- Hose (size depends on your equipment)
- Hose clamps (2x)
- Parts to build a bracket (see 2.2-a on page 3)

IMPORTANT

The installation of the AGTIV® Liquid Injection Kit **requires approval** by a Premier Tech **representative**.

In this regard, pictures of the installation must be sent before usage to Premier Tech at the following email address:

info@ptagtiv.com.

1.2 Assemble the AGTIV® Liquid Injection Kit following these steps:

a Put the **sealing ring** without any filter in.

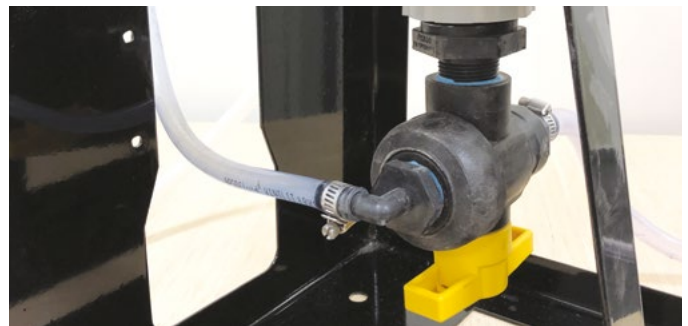

b Install the **Dosatron® grey bracket** on the metal stand.

c Secure the installation of the **Dosatron® pump** on the tank support (b) with a **clamp**.

d Fix the suction hose of the **Dosatron®** to the valve **under the tank**. **Cut the length of the suction hose** (if necessary) to eliminate any loop in the hose (this will prevent the stagnation of the liquid).

e Fix the suction hose with **clamps**. Tighten the clamps.

f Select the right reducing nipple size to connect the **Main flow hose ①** from the existing in-furrow system to the AGTIV® Liquid Injection Kit & to the outlet **②**.

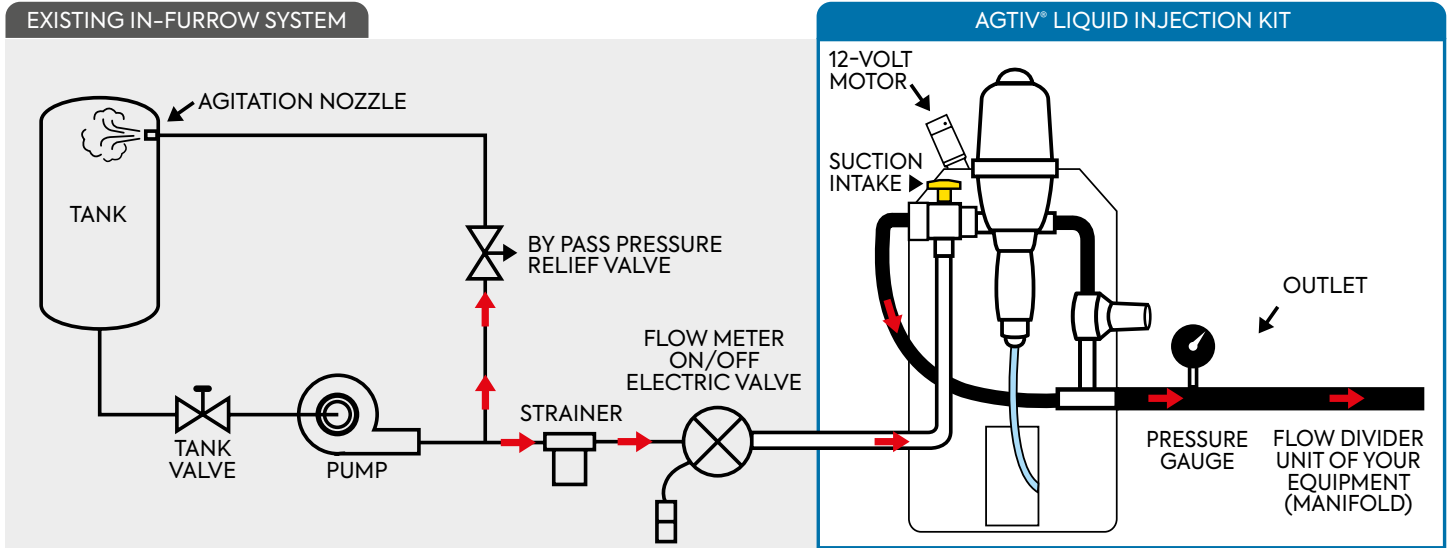

① One by the **yellow valve** of the Dosatron® (intake)

② One at the **outlet of the injection kit**

2 INSTALL THE INJECTION KIT ON THE EXISTING IN-FURROW SYSTEM

See below a diagram of where the AGTIV® Liquid Injection Kit should be integrated on the existing in-furrow system.

2.1 Select where to install the equipment on the planter / seeder

These are recommendations to ensure the good performance of the equipment:

- ✓ Prevent damage by other parts of the equipment
- ✓ Make sure the suction hose of the Dosatron® unit is visible
- ✓ Have an easy way to fill, empty, clean and maintain the tank
- ✓ Install where the dust is minimum

2.2 Install the AGTIV® Liquid Injection Kit on the planter / seeder

a

Build a **bracket** to hold the injection kit on the planter / seeder.

b

Place the AGTIV® Liquid Injection Kit on the bracket.

2.2 Install the AGTIV® Liquid Injection Kit on the planter / seeder (cont'd)

c

Measure the length of the hoses between the Dosatron® unit and the flow divider unit of the existing in-furrow system.

e

Tie the hoses together to make sure they will not move.

f

If desired: add a 2-way switch to be able to turn the mixer off and on, **install a 12-volt electrical wire** from the tractor to the electrical motor of the mixer. Make sure that the motor **runs at all times** when using the AGTIV® Liquid Injection kit.

g

On the planter, **remove all cylinder screens** by the nozzles.

h

Before using the AGTIV® Liquid Injection kit, send pictures of the installation at info@ptagtiv.com

d

Install the 2 hoses:

1

one from the flow meter coming from the existing in-furrow system to the **main yellow valve** of the injection kit.

2

one at the outlet of the injection kit to the flow divider unit of the existing in-furrow system.

Tighten with clamps to hold properly.
